

About the IIIPS Estimator

Elizabeth McQuerry, Glenbrook Partners

Cici Northup, Glenbrook Partners

Goals of the Estimator

To create an objective tool to help payments executives and governments compare the core business case among different platform options for an inclusive instant payments system (IIPS), answering questions like:

- Which approach is the most cost-effective?
- Which approach is the fastest to go-live?
- Can the platform support a cost recovery plus investment model?

Comparing Thin Platform Approaches

A vendor licensed platform:
solutions licensed from a
vendor

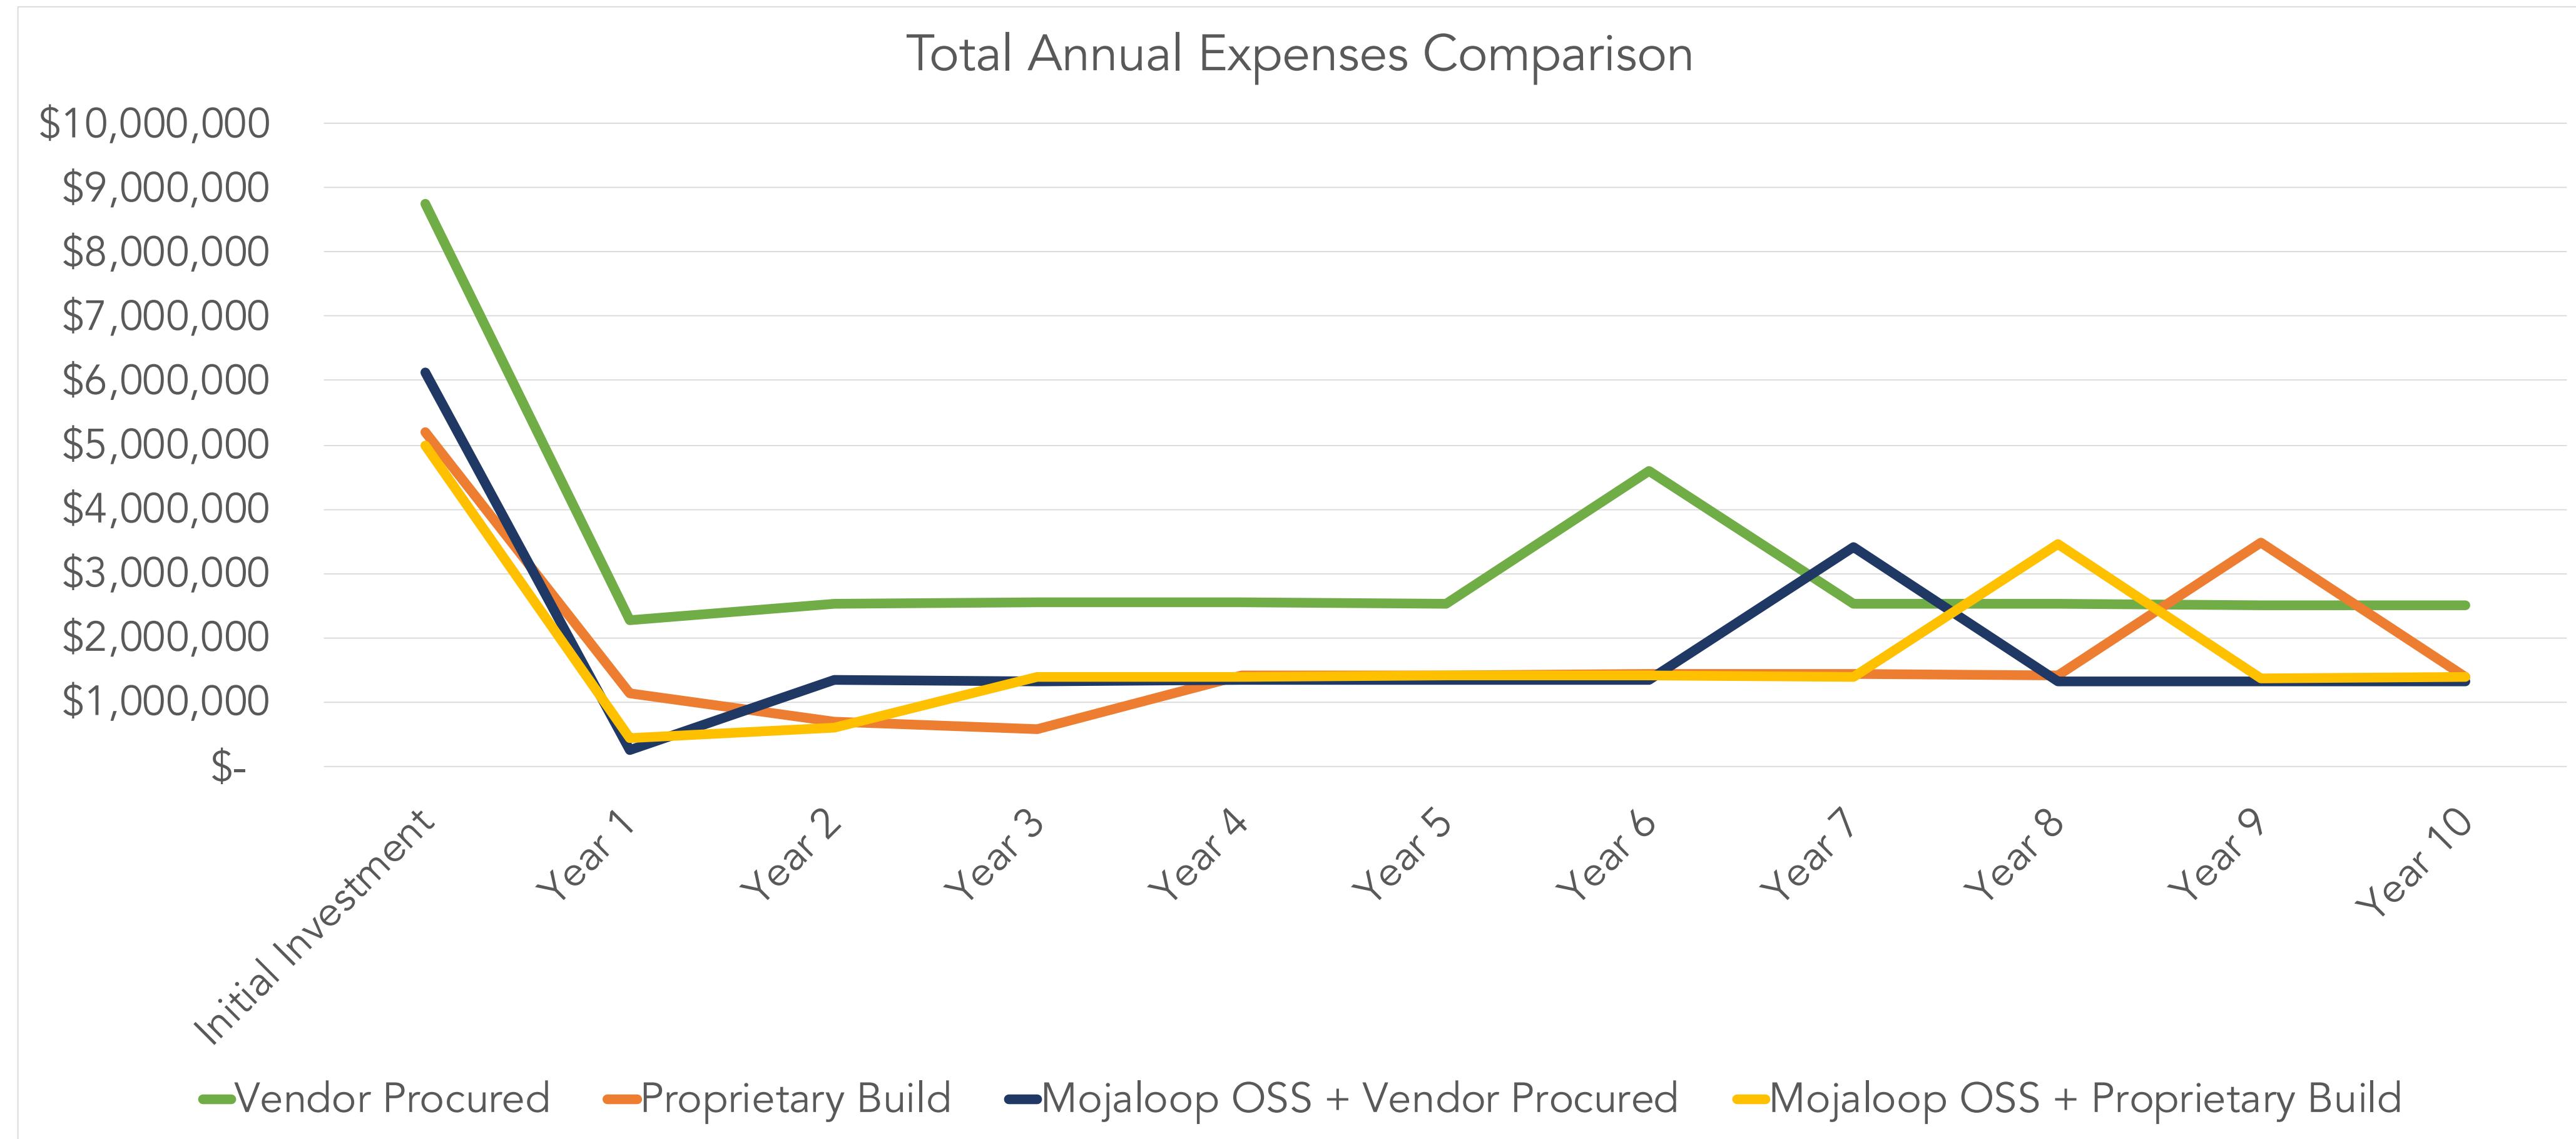

A proprietary build platform:
solutions built by an in-house
team

A Mojaloop platform: solutions leveraging the Mojaloop OSS. There are two ‘flavors’ to a Mojaloop platform:

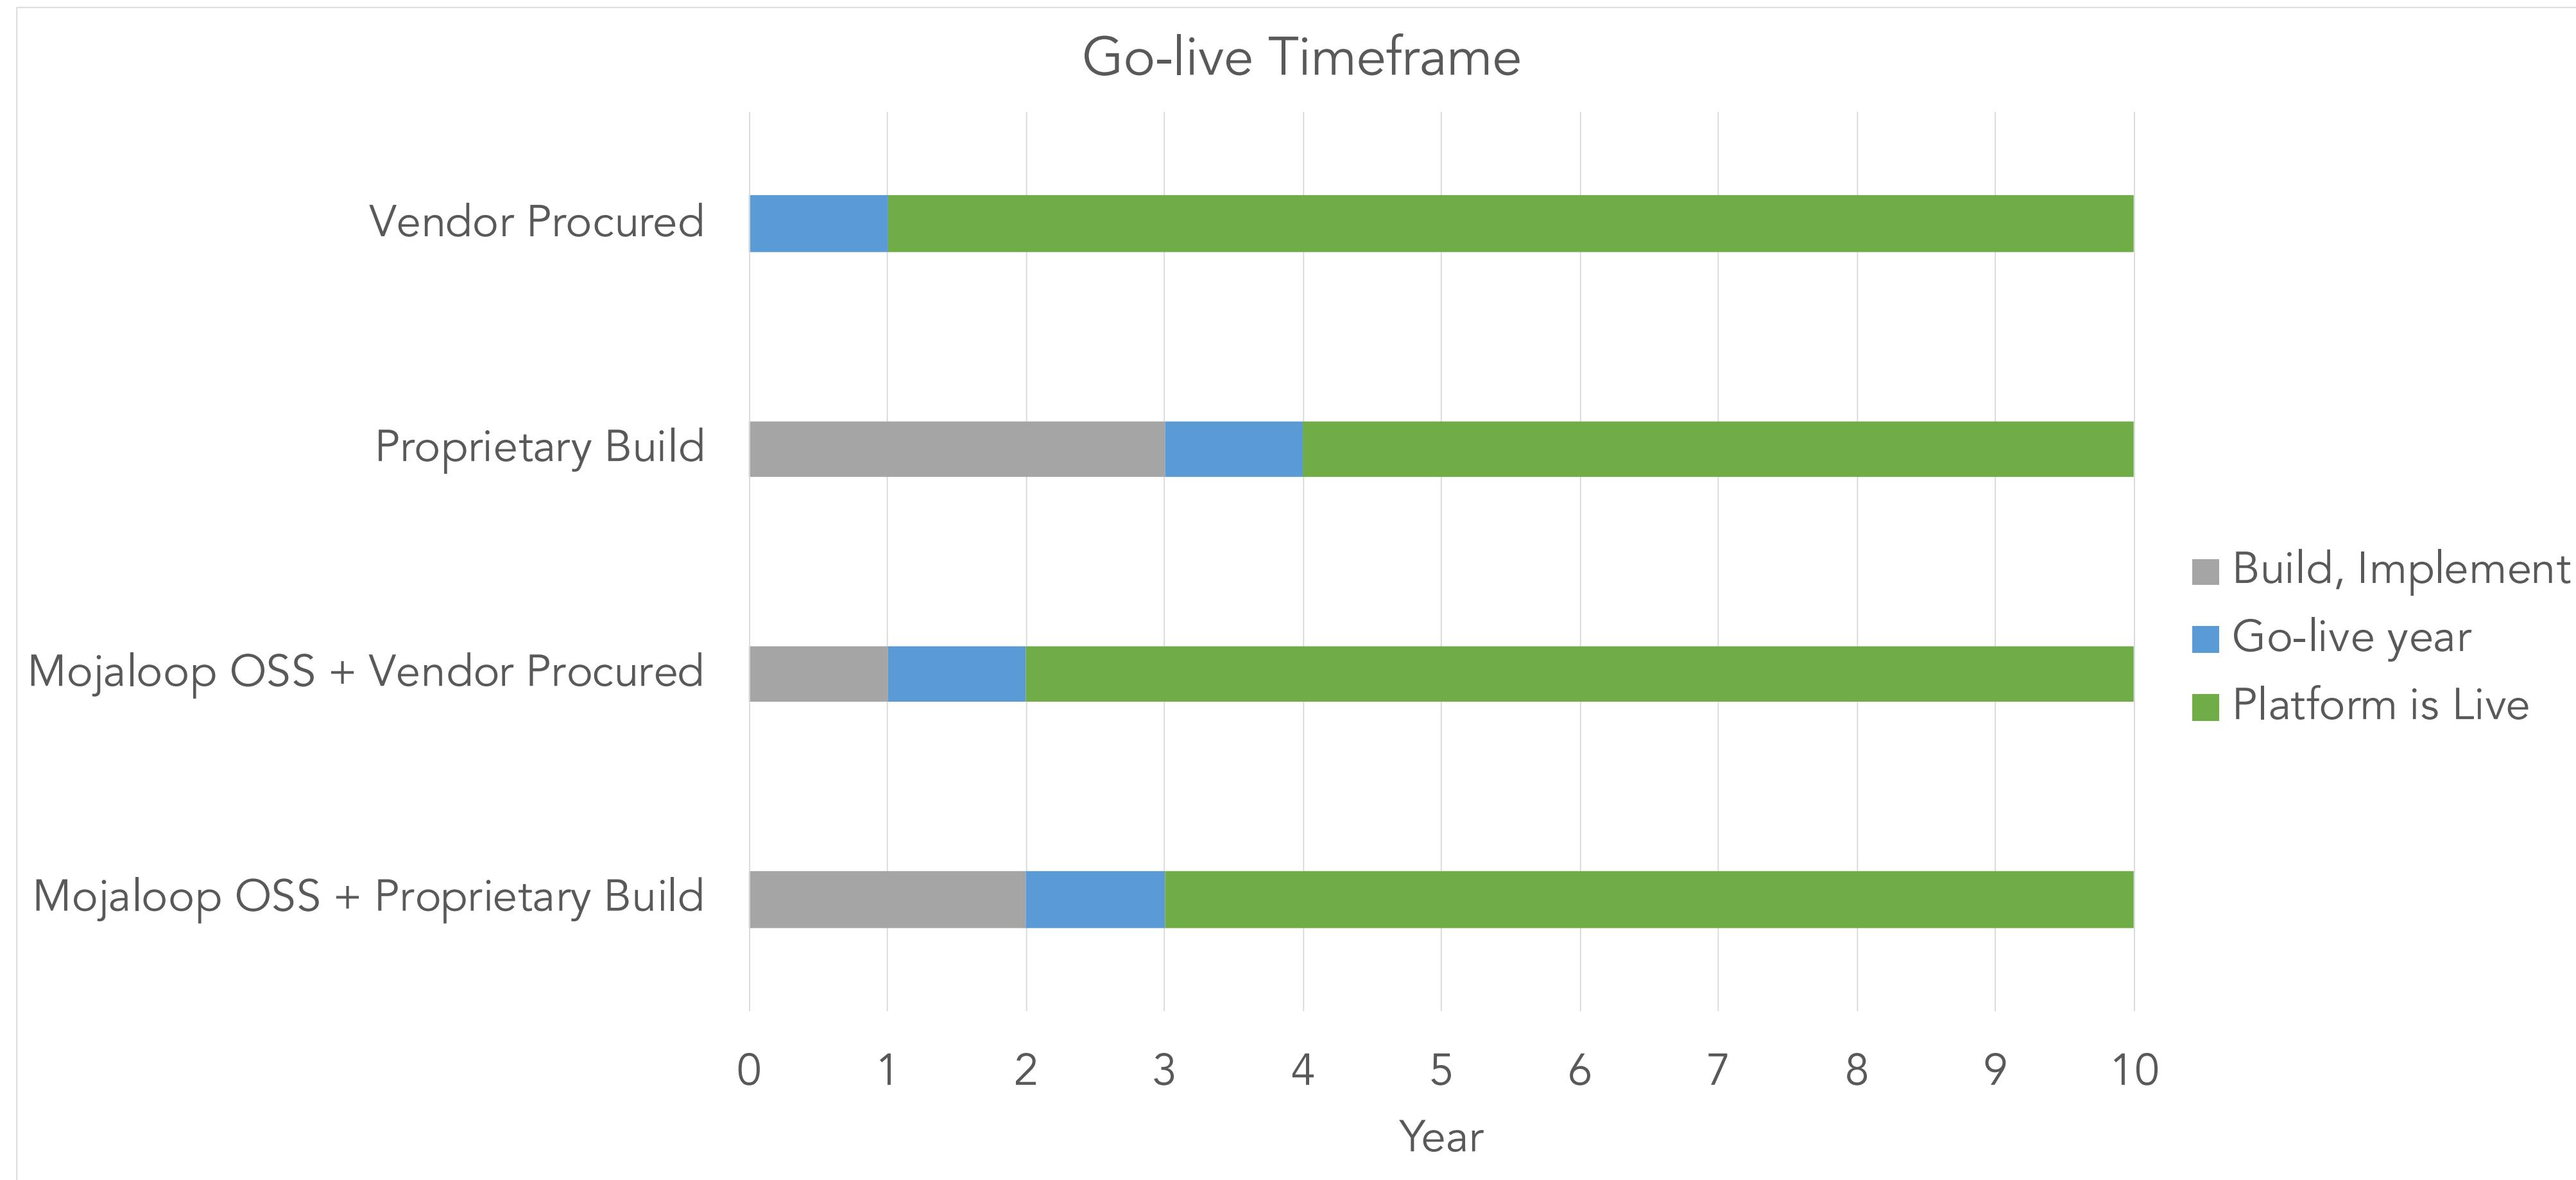

Platforms that leverage
Mojaloop when possible
and license other non-OSS
components from a vendor

Platforms that leverage
Mojaloop when possible
and build other non-OSS
components using in-house
teams

Illustrative Output

Illustrative Output

Other Estimator Outputs

The Estimator produces individual data visualizations and outputs for each platform approach
