Operationalizing Mojaloop

Country-Grade IIPS Rails

Hardened Mojaloop IIPS Lifecycle Management - deploying and operating a highly available, secure, performant, ISO 27001 compliance on AWS or on-premises.

Vision & Leadership making… Mojaloop IIPS manageable

We believe…

That inclusivity comes from interoperability,
and that while no person wants to “make a payment”,
It is a reality that payments are necessary for survival and for growth

We had a dream…

That payments would be come transparent, and access and cost challenges would fade to zero

To realized that we have invested in the open source program Mojaloop so that it will be a scaled solution where engineers weren’t reinviting the basics but helping build the financial service of the future

Vision & Leadership making… Mojaloop IIPS manageable

MojaCom

2016 – pre-Sibos PoC

mowali

From PoC Code to First Production, to Production at Scale

- That depends on non-production environments…

A world of change, whether

- Security,
- undocumented feature or
- architecture changes
- Service roll-out

IIPS are Critical Systems / Digital Public infrastructure it is

➔When things go wrong

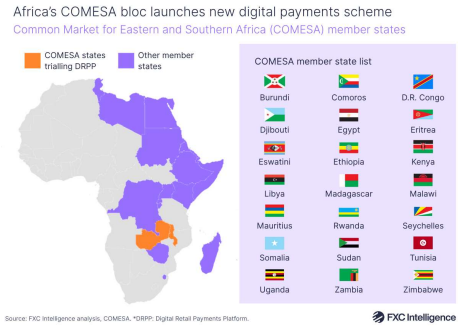

➔ You need to know that something is breaking before it fails,

➔Observability and Control

are essential features of the Service we are committed to provide

IIPS deserves Critical System Thinking
Mojaloop Control Center is the basis for delivering that

2026 – Domestic and Regional DPI

Governance & Operational Consistency

1. Unified Control Center standardizes deployments across AWS & on-premises.
2. Ensures environmental parity → identical DR, security, and scaling everywhere.
3. Lifecycle manager with controlled, auditable workflows.
4. Integrated observability for proactive health management.

Governance you can trust, consistency you can rely on.

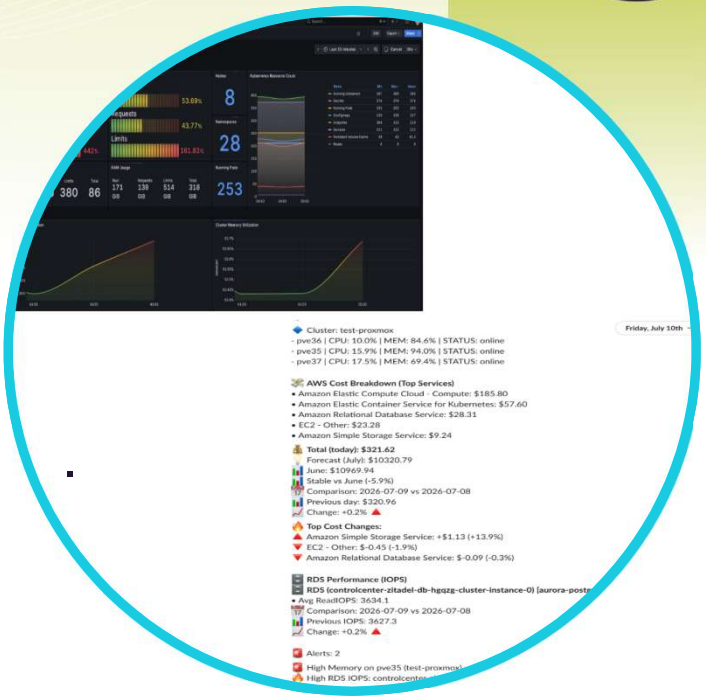

Security Posture: Zero-Trust Strength

1. Pod-to-pod mTLS encryption (Istio Ambient).
2. Percona PXC hardened for financial systems: multi-master, multi-proxy, PITR-enabled.
3. Built-in API Security, penetration, performance testing embed on pipeline (OWASP/ZAP)
4. TLS enforced for all database transport.
5. Role-Based Access Control + zero-touch VPN.
6. Hardened CI/CD pipeline with automated security gates.
7. ISO27001 CIA Triad embedded [Controls]→ ready for certification.

Security at scale, certified by design.

Observability & Intelligence

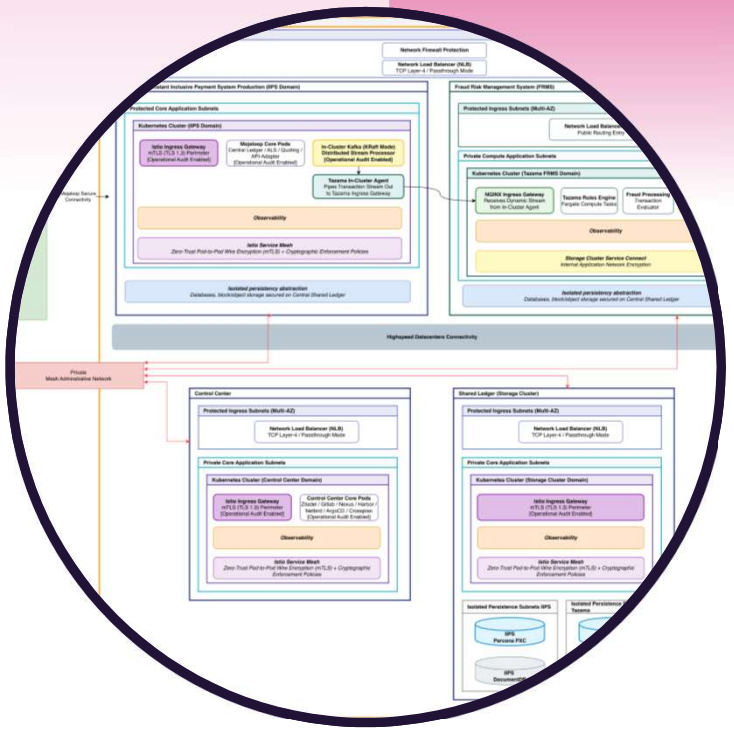

- Synthetic transactions detect failures before participants.
- Functional Participant Monitoring: transfers, lookups, clearing.
- Global dashboard: single pane of glass for solution health.
- AI-powered enriched observability → SOC + FinOps checks integrated.

Intelligent observability for flawless operations.

Efficiency, Optimization & Strength

- Enriched observability provides the control framework for capacity planning.
- Detects undersized resources before throttling and eliminates oversized “zombie” allocations.
- AI-powered capacity planning forecasts demand, optimizes scaling, ensures sustainable resource use.
- Operationalization has transformed complexity into operational reality:
  - Many instances of real-money Mojaloop IIPS implementations, supported by full lifecycle pipelines and real-time observability.
  - Proven ability to deliver inter-schema and single-schema deployments with unmatched reliability.

AI-powered observability transforms operations from firefighting into precision foresight.

Operationalizing Financial Inclusion at Scale

A dream pursued
across Africa for decades.

Production solution, resilient and secure

Challenges
- Political hurdles
- Sovereignties
- Budgetary constraints

Mojaloop Control Center delivers IIPS Services
bridges vision and execution – resilient, secure, ready to scale

Resilient Seoure Ready
